The CAD layer's architecture panel (or UI) displays architectural views in the drawing space, and has methods for specifying: The origin point for the architectural view The view angle for the architectural view The point for the view The object to align to the architectural view, including options to include or exclude: Floor plan views Office layouts and sections Home and room interiors Skyscraper elevations Supports any number of views in the architectural view, with each view having its own scale and coordinate system The Architecture Map tool enables you to set both visible and hidden layers for the architectural view. You can choose to show a specific layer as the architectural view, or you can define a layer to always show when the tool is invoked. You can also suppress the architectural view altogether.

AutoCAD Architecture Map Properties The AutoCAD Architecture Map tool supports the following drawing-related settings: General/Drawing Scale To change the drawing scale, enter the desired scale in the drawing field. Architectural View Settings You can use the Architecture Map tool to: Change the origin point of the architectural view Change the view angle of the architectural view Change the point of view of the architectural view Change the coordinate system of the architectural view Change the current layer for the architectural view Add and delete layers for the architectural view The following table lists settings that the Architecture Map tool supports. Table 1 Architecture Map settings Setting Description Range Display of setting Options Select a visible layer for the architectural view – current layer, or a specific layer. If you select a specific layer, that layer is set as the architectural view and is visible in the architectural view. You can select one of the following layers: No layer (If you select this setting, all architectural view views are suppressed.) All layers All layers (Select this setting to always show the architectural view regardless of the current layer.) Architectural View Settings You can set the scale of the architectural view. The drawing scale is automatically calculated based on the scale of the drawing and the view angle. You can set a scale that differs from the drawing scale. (You can set a scale of 1:

#### What's New In AutoCAD?

Now you can import markup from PDFs, CAD files, and cloud storage into your drawings, including external libraries (video: 2:23 min.) New sharing tools make it easy to display and publish your drawings in creative ways, including online in web-based web browsers, mobile apps, and cloud services (video: 3:40 min.) You can now save commands, create libraries, and layer styles that update when you open them. These tools can make your drawing process faster and more effective (video: 2:48 min.) Easier ways to use Append, Map, Print, and Zoom tools to navigate your drawings more quickly (video: 3:01 min.) With Path Leader, you can use the path of another point, arc, polyline, or custom shape to guide your own movement through space. This feature provides an intuitive way to create complex geometric shapes and then move through them (video: 1:28 min.) Creating shapes with new tool shortcuts such as Curvature, Circle, and Center Line. You can use these tools to make circles, elliptical arcs, and even spiral shapes (video: 1:40 min.) A new Edit Type option for drawing defaults for basic shapes, including circles, ellipses, and arc segments (video: 3:01 min.) With a new Mark Up option that lets you create a new object and immediately assign it a layer, pen, or text style, while it remains editable (video: 2:46 min.) With the new Dynamic Layers feature, you can temporarily create a new layer and assign it any pen, brush, or text style. You can also view and edit layers through dynamic boundaries so you always see the most recent changes (video: 2:41 min.) With a new text style option, you can assign pen, brush, or text styles to objects in the drawing window and then dynamically change styles across all objects within the drawing (video: 3:40 min.) Design Tips: With Custom Rulers, you can display your custom baseline grid from the drawing or CAD file. You can choose from preset ruler scales or create your own scale using any 2D or 3D object in your drawings (video: 2:19 min.) You can now share your drawings with others using the PDF, IWG-Cad, or Cloud Sharing options. You can save your work with new Arc Selection, Continuous
